

## Heavy Industrial Processing Equipment & Systems

**Industries Served:** Solar, Ceramics, Agricultural, and more

Designed and built for industrial applications such as polishing compounds or fertilizer blending, DivInd uses heavy duty materials of construction ensuring a reliable operation. Many of these systems are skid mounted, allowing an open design to improve equipment servicing. Separate enclosures allow for automation and user interface panels to be mounted in a safe location. DivInd has the background to select the best materials of construction towards your applications. Our knowledge of different dispense techniques, instrumentation, and process design provide the right solution that gives flexibility in recipes, allows ease of cleaning, and can be modular to allow for additional modifications in future needs.
