

## High Purity Chemical Processing Equipment & Systems

**Industries Served:** Electronics, Bio/Pharm, Solar and Specialty

The need to operate multiple setups for product qualification and research, Blending and dispensing chemical recipes to a production line requires materials that are compatible with the chemicals used and will not effect the blended chemistry. DivIND's solutions to equipment sets include features that allow ease of service, minimizing dead legs and unnecessary piping runs that hamper maintenance, and provide the necessary safety and ergonomic functions that improve the overall operability of the equipment. DivIND has designed a number of different equipment solutions from simple stand alone operations to dedicated processes using multiple chemical recipes. A variety of different techniques are at our reach to provide the best solution towards a process that has proven return on the initial investment.
